PRESS RELEASE

Conservation Sudbury Completes Low Impact Development Pilot Project

Please join us this **evening at 6:30 PM** for a walk-through and grand opening of the project site at the Gerry McCrory Countryside Sports Complex at [235 Countryside Dr.](#)

LID also known as green infrastructure is an innovative stormwater management technique that utilizes natural features such as specialized soils, stone, and native tree, shrub, and perennial species as its infrastructure. The goal of LID is to mimic pre-development hydrologic conditions in order to improve water quality and reduce flooding.

The project was undertaken with support from Environment and Climate Change Canada through the Environmental Damages Fund.

Project partners attending the event:

The City of Greater Sudbury

Greenland International Consulting – System Design

TeraNorth Construction & Engineering Limited – Contractor

Hollandia Land and Environmental Solutions – Sub-Contractor and Supplier

Conservation Sudbury hopes that this system can serve as a demonstration site for homeowners and developers who are interested in incorporating green infrastructure into their property or development at any stage of the process.
